

BLAZING INFERNO

ACTIVATOR

COVERSTOCK

Part Number

60-104001-93X

Coverstock

Activator
Color: Red/Orange Pearl
Hardness: 76-77

Factory Finish

High Gloss Polish

Core Dynamics

RG-max: 2.564
RG-min: 2.531
RG-diff.: 0.033
Average RG: 4.3

Performance

Hook Potential: 110
Length: 115
Typical Breakpoint
Shape: 90

Available Weights

12-16 Pounds

Hook Potential:

Reaction Characteristics

The **Blazing Inferno** is a higher RG version of the original Inferno. Even though the inner core shape is the same as the Inferno, 1.17 pounds of weight have been moved from the inner core to the outer core. This shift in weight results in a significantly more cover heavy ball. The RG-min of the Blazing Inferno is 0.068" higher and the RG-diff is 0.017" lower than the original Inferno. This change in mass distribution allows the **Blazing Inferno** to be a better match-up when reduced traction through the heads and the mid-lane are desired.

Compared to your original Inferno:

- The Blazing Inferno will match-up better to drier lane conditions and shorter patterns.
- The Blazing Inferno will match-up better to lane surfaces that are in less than ideal condition.
- The Blazing Inferno will match-up better for bowlers who struggle with early ball reaction.

Brunswick's new **Activator Coverstock** has quickly established a reputation for excellence in ball reaction, durability and longevity of ball reaction. On the lanes, Activator Coverstock is clean through the heads with excellent mid-lane recovery and a strong arcing back-end reaction that creates powerful pin action. Owners of the original Inferno have reported that it requires less frequent resurfacing and rejuvenations and is more resistant to cracking than other reactive coverstock balls.

Utility

- Out of the Box:** With its High Gloss Polish finish the **Blazing Inferno** will match up well on medium-dry to medium-oily lane conditions.
- When dulled:** The **Blazing Inferno** hooking action will increase and its arc will become more even, creating a better match-up for oily lane conditions and further blending the over/under reactions seen on wet/dry lane conditions.

Reaction Setup

Warning: The **Blazing Inferno** is a low differential ball. This means that high RPM players can use leverage pin positions and medium-low RPM players may need a flare increasing hole to achieve the most aggressive ball reactions. See Brunswick drilling instructions for symmetric core low-differential balls.

The **Blazing Inferno** is finished with a high gloss surface which enhances its appearance and reduces hooking action in the oil. High gloss finishes can sometimes cause over/under reactions, too little hooking action in the oil, then too much hooking action off the dry, which can be hard to control. To increase hooking action and smooth out the ball reaction dull the surface, first with a fine 800-1000 grit abrasive or grey pad. If more hooking action and a smoother reaction is desired dull the surface of the ball with a coarse 320-400 grit abrasive or red pad.

Bring your **Blazing Inferno** back to its original Factory Finish with Brunswick's new **High Gloss Polish**. Available at your local proshop.
