

Specifications - Power Groove™ Proactive – Plum Pearl

Part Number

60-103885-93x

Covertstock

Proactive - Low Load

Color: Plum Pearl

Hardness: 76-78

Factory Finish

Cerium Oxide - Trizact

Core Dynamics

RG Max: 2.708

RG Min: 2.667

RG Diff: 0.041

RG Avg: 8.2

Performance

Hook Potential: 75

Length: 145

Breakpoint Shape: 70

Available Weights

10-16 Pounds

(10-11 use a spherical offset core,

POWER

GROOVE

PROACTIVE

Reaction Characteristics

Plastic slips. The Groove grips. And grip is exactly what you need to improve your game. When you're ready to step up from plastic, get in the Groove.

Want more hook? Move all the way up to Proactive coverstock technology. Compared to Reactive, Proactive coverstock technology increases hooking action in the oil by adding texturizing particles that create a tread-like surface that tractions through heavier amounts of oil, increasing friction and hooking action. Like Reactive coverstocks, Proactive coverstocks can be sanded or shined to create large differences in hook potential. Proactive coverstocks also respond less violently to dry lane surfaces than Reactive coverstocks, creating a smoother, more arcing ball reaction with more control.

Coverstock: The Plum Pearl features Brunswick's popular Low-Load Proactive coverstock. First used on the Navy Quantum, this Proactive coverstock is the strongest ever used on a Groove class ball.

Core: The Plum Pearl uses Brunswick's DISC (Differential Increasing Side Cylinders) core technology which provides:

- The largest track flare potential of any ball in its class
- Consistent track flare potentials at all weights from 12-16 pounds
- Larger, more consistent pin-out distances at all weights from 12-16 pounds
- A more driller friendly design. The precise geometric placement of high density side cylinders maximizes the increase in Track Flare Potential while maintaining symmetry for easy drilling.

Reaction Setup

The Power Groove Plum Pearl can be drilled using the standard drilling techniques developed for two-piece balls, see the included drilling instructions for reaction characteristics and layout details.

The Power Groove Plum Pearl is finished with a high gloss surface which enhances it's appearance **and** reduces hooking action in the oil. High gloss finishes can sometimes cause over/under reactions, too little hooking action in the oil, then too much hooking action off the dry, which can be hard to control. To increase hooking action and smooth out the ball reaction dull the surface, first with the fine 5-micron Trizact abrasive. If more hooking action and a smoother reaction is desired dull the surface of the ball with a coarser 10 or 35-micron Trizact abrasive.
