

**EVIL SIEGE™**

The Evil Siege unites the new Propel™ Pearl coverstock and the proven MACE core to produce a ball motion that is strong in the mid-lane and aggressive on the backend. The Evil Siege is the ball when your game needs help battling medium to oily conditions and poor pin action.

60-105248

**MACE™ CORE**

Mechanical Asymmetric Core Engineering. Designed as a two-component elliptical core system—dynamically the strongest asymmetric core ever produced for a Brunswick reactive ball.

**PRO TIP**

"The Evil Siege is clean in the front part of the lane. It gives me more movement towards the pins and better carry."

*Carolyn Dorin-Ballard*

**SIEGE™**

Siege uses Propel coverstock, an evolutionary coverstock designed to improve mid-lane and backend traction on today's slicker surfaces. Propel coverstock combined with the new MACE core delivers both length and strength. The strong traction in the oil keeps the Siege on target. The aggressive hook on the backend increases pin action and delivers awesome hitting power. Take the Siege to battle on difficult oil conditions and raise your game.

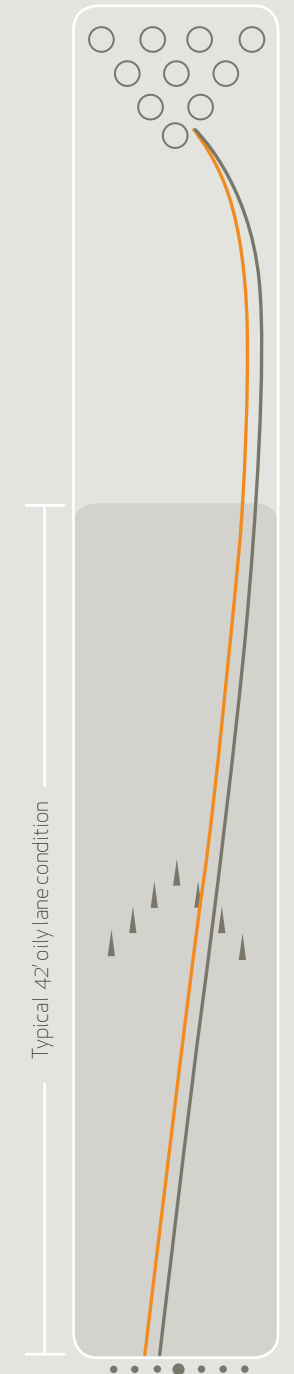

60-105214

**PRO TIP**

"It has arrived, a ball that allows you to control any part of the lane and attacks the pins with more force than you can handle."

*Sean Rash*
