

©2009 Brunswick Bowling & Billiards Corporation. Form #0709-26

IT CAN SENSE YOUR EXCITEMENT. The new Python, with its highly reactive coverstock and fast revving core, is for bowlers who are looking for the ultimate in control and predictable power. Handle one (under the supervision of an expert) at your local pro shop, or visit brunswickbowling.com.

Part Number

60-105210-93X

Coverstock

EnMotion™ - Reactive
Color: Blue Pearl / Yellow Pearl
Hardness: 76-78
Glow Engraving

Factory Finish

High Gloss Polish

Core Dynamics @ 16#

RG Max: 2.522
RG Min: 2.480
RG Diff.: 0.042
Average RG: 3.0 of 10

Performance

Hook Potential: 115
Length: 100
Typical Breakpoint Shape: 70
Chart Position: N -12

Available Weights

10 - 16 Pounds

PYTHON

en **MOTION**™
Coverstock

Predictable power is the best way to describe the new *Python*. With a more direct line of attack on the lane, a fast revving core and constricting power on the pins, the *Python* provides a secure ball reaction at the Advanced Performance price point. For the bowler who wants to play straighter angles with predictable power, get a *Python* and squeeze the life out of your opponent.

Technology

EnMotion Coverstock: The *Python* is the first ball with EnMotion coverstock available at the Advanced Performance price point. The *Python* uses a Pearled version of the EnMotion coverstock. EnMotion combines the best elements from our PowerKoil™, Activator® and N'Control™ coverstock systems.

Low RG Core: The *Python* core uses an updated version of the Original Inferno®. However, the weight distribution between the inner core and outer core has been adjusted to raise the overall RG, so even with its aggressive EnMotion coverstock, the *Python* will clear the fronts, rev in the mid-lane and devour the pins with one big bite.

High Gloss Polish: The *Python* is finished with Brunswick's **Factory Finish High Gloss Polish** to maximize the skid-snap reaction out of the box. This surface preparation will allow most bowlers to match-up to freshly oiled and moderately broken down house conditions.

Reaction Characteristics

- Out of the Box:** With its high gloss polish surface, the *Python* matches up well on most house conditions.
- When dulled:** The *Python's* hooking action will increase and its arc will become more even, creating a better match-up for medium-oily lane conditions and for smoothing over/under reactions that are sometimes encountered on wet/dry lane conditions.

Reaction Setup

The *Python* can be drilled using the standard drilling techniques developed for two-piece balls. Please visit www.brunswickbowling.com/balls to view the drilling instructions for reaction characteristics and layout details. The *Python* is surfaced with Brunswick's **Factory Finish High Gloss Polish** which increases its skid-snap characteristics. Shiny surface finishes can sometimes skid too long, resulting in reduced backend reaction and hitting power. To increase traction, roughen the surface with Brunswick's **Factory Finish Rough Buff**.
