

PYTHON[™] — NEW

Predictable power resonates from the Python. With a more direct line of attack on the lane, a fast rewinding core and constricting power on the pins – the Python provides a secure ball reaction at the Advanced Performance price point. For the bowler who wants to play straighter angles with power you can count on, let the Python take control.

60-105210

LOW RG CORE

The Python uses the same inner core shape as the MaXXX Zone[®].

PRO TIP

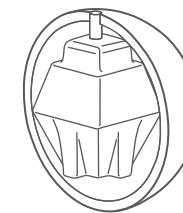

"This is the first ball out of my bag. Everyone needs a benchmark ball. I can tell what part of the lane I'm going to play by throwing it three or four times."

Sean Rash

RATTLER[™]

The Rattler uses the multi-sided Rocket[™] core system by Brunswick, providing a low RG core that, when combined with the original Activator[®] coverstock, produces a ball reaction that is unmatched at the Advanced Performance price point. Clean through the front with an aggressive move at the breakpoint, the Rattler gives amazing bang for the buck. There isn't another ball in this class that's even close.

60-104976

MULTI-SIDED ROCKET CORE

A low RG core combined with the original Activator coverstock. This core design produces a reaction that is unmatched at the Advanced Performance price point.

PRO TIP

"This is the ball I use when I need to clear the front part of the lane, the heads, and need more of an aggressive backend reaction."

Carolyn Dorin-Ballard

COPPERHEAD[™]

The Copperhead uses the multi-sided Rocket[™] core system in combination with the proven PowrKoil 18[™] coverstock to provide a low RG ball that revs up strong and creates tremendous mid-lane recovery. The 800-grit sanded finish on the Copperhead creates excellent traction in the oil and delivers a strong and continuous breakpoint. The Copperhead will bite through the oil and strike the pins.

60-104912

MULTI-SIDED ROCKET CORE

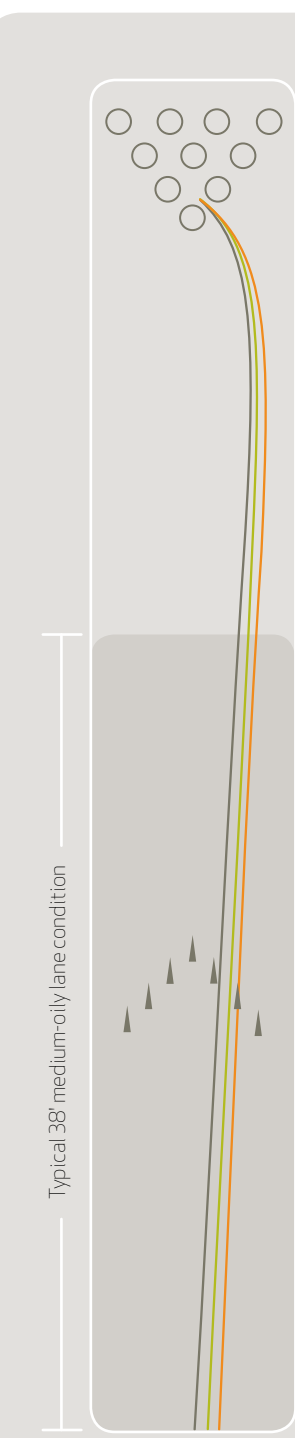

A low RG core combined with the proven PowrKoil 18 coverstock. This core design enables the ball to rev up strong and create tremendous mid-lane recovery.

PRO TIP

"The ball I go to when I'm looking for an even reaction all the way down the lane. The hook is gradual and continuous."

Johnny Petraglia
