

MACE CORE

Mechanical Asymmetric Core Engineering. Designed as a two-component elliptical core system—dynamically the strongest asymmetric core ever produced for a Brunswick reactive ball.

PRO TIP

"It has arrived, a ball that allows you to control any part of the lane and attacks the pins with more force than you can handle."

Sean Rash

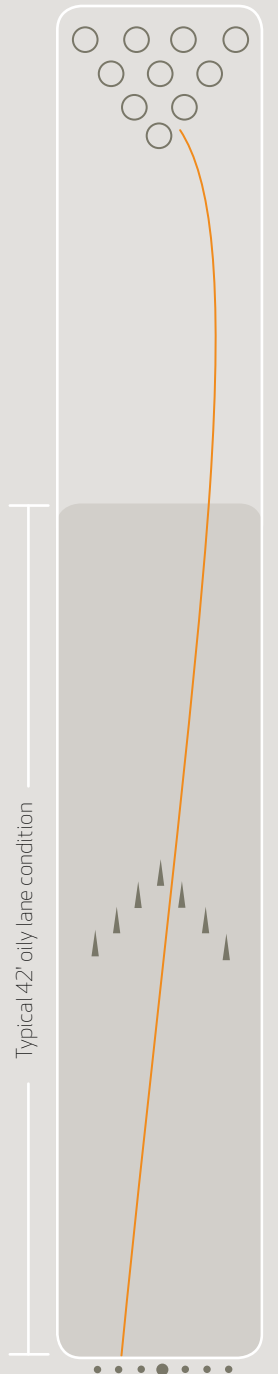

SIEGE™

Siege introduces Recoil coverstock, an evolutionary coverstock designed to improve mid-lane and backend traction on today's slicker surfaces. Recoil coverstock combined with the new MACE core delivers both length and strength. The strong traction in the oil keeps the Siege on target. The aggressive hook on the backend increases pin action and delivers awesome hitting power. Take the Siege to battle on difficult oil conditions and raise your game. Siege the day!
