Coverstock

ConneXion Reactive
2-Color Pearl
Red / Silver Pearl
Hardness: 76-78

Factory Finish

4,000 Micro Pad

Core Dynamics @ 16#

Two-component
Symmetrical Core
RG max: 2.514
RG min: 2.469
RG diff: 0.045
Average RG: 2.6 of 10

Performance

Hook Potential: 160
Length: 110
Typical Breakpoint
Shape: 95
Chart Position: R - 3
Available Weights
12-16 Pounds

Core: The new ultra low RG **Paragon** core was designed with two intentions. First, lower the RG to create a faster revving core that will provide improved mid-lane traction. And second, raise the RG differential to increase the track flare potential which will generate more overall hook with standard layouts and the use of interchangeable thumb sleeves.

Coverstock: The **Wild Thing** utilizes **ConneXion** coverstock known for its unbelievable traction response from foul line to head pin. The aggressive connection of the **Wild Thing** to the lane surface inspires confidence in the ball reaction that allows bowlers to play the lanes the way they want to.

Ball Motion: The **Wild Thing** and its new ultra low RG core system improves the adhesion of **ConneXion** coverstock to accelerate the response to friction and turn its attack loose on the pins. This core/coverstock combination allows the **Wild Thing** to generate a shape never seen before in the Brunswick line.

Micro Finishing Pads: The bowling industry is starting to embrace the surface finishes created by 2000-grit and 4000-grit abrasives. These abrasives create a glossy finish that many bowlers would assume are polished with a wax or similar compound. The benefit to the bowler is that these finishes create length similar to balls coated with compound finishes, but are better able to handle carrydown. The **Wild Thing** is finished with 4000-grit Abrasive pads driven by the new Haus high speed bowling ball resurfacing machine.

Reaction Characteristics

Out of the Box: With its 4000-grit micro pad finish, the **Wild Thing** will provide excellent length and a strong back-end reaction to match up on medium to oily lane conditions for a wide range of bowling styles.

If your Wild Thing goes too long: Shiny surface finishes sometimes cause the ball to go too long before breaking. To get your *Wild thing* rolling sooner, dull the surface with a 2000-grit micro pad to increase hooking action. To further increase hooking action, use a rougher abrasive to create an earlier reaction.

If your Wild Thing hooks too early: Polish your *Wild Thing* with Brunswick's Factory Finish High Gloss Polish to increase length.
