### PERFORMANCE INDEX:

- PRO**  
Brunswick's most advanced technology. The strongest core and cover combinations we offer.
- HIGH**  
Top performing balls offering great hook potential on a wide range of conditions.
- ADVANCED**  
Performance features with a wide range of reactions for bowlers of all skill levels.
- AFFORDABLE**  
Great performance with lower hook potential. Perfect for drier conditions and especially newer bowlers looking for a great value.
- POLYESTER**  
Great for first time ball purchasers or picking up spares.
- FLIP**  
Balls that skid through the front part of the lane with the strongest change of direction down lane. Balls with higher numbers will have a stronger change of direction.
- TRACTION**  
Balls that hook earlier on the lane providing more hook on oilier conditions or for bowlers with lower rev rates. Balls with higher numbers will have more overall hook.
- ALL PURPOSE**  
Versatile ball motion that is useful across various lane conditions, usually a continuous and strong arcing ball. Balls with higher numbers will have stronger overall reactions.
- CONTROL**  
Predictable, typically a smooth ball motion throughout the lane. Balls with higher numbers will have more overall reaction.
- ACCURATE**  
Low hook potential, typically a spare ball or useful on extremely dry conditions. Balls with higher numbers will be the straightest.

**75 REACTION SHAPE STRENGTH**  
 The higher the number the stronger the reaction shape – with 1 being the least and 100 the most.

### HOW TO KEEP THE REACTION OF YOUR NEW BALL:

Preventative maintenance is the key to getting longevity out of today's powerful coverstocks. What makes today's balls hook is the ball absorbing oil into the pores creating more friction and added hook. Due to the oil absorption and dirt build up you will notice a slow deterioration in ball performance. We suggest using a Brunswick Reactive Shabby Pad in between shots, and a bowling ball cleaner be used right after bowling to clean the ball's cover. Putting the ball away without cleaning allows the oil and dirt to be absorbed deeper into the cover. The surface of the ball is the number one factor in good ball reaction
